PROFILE

Fresh graduate in Informatics Engineering from Politeknik Negeri Bandung. I have experience in web and backend development from an internship and academic projects. I have worked with search systems (OpenSearch, BM25, and SBERT), REST APIs, and databases, using languages such as Python, JavaScript, and Java. I also built a full web app with React and Express.js. I work well in a team and use AI tools to learn and solve problems. I want to use my skills to help in useful projects and keep growing in the technology industry.

EDUCATION

Politeknik Negeri Bandung Aug 2022 - Aug 2026

Bachelor of Applied Science in Informatics Engineering | GPA: 3.21/4.00

WORK EXPERIENCE

PT Periplus Bookindo Jul 2025 - Oct 2025

Web Developer - Internship

- Built and tested a Search Suggestion feature with OpenSearch to make search faster and more relevant on the Periplus website. This included designing and managing the OpenSearch index.
- Used four query strategies: completion, search-as-you-type, phrase, and fuzzy.
- Cleaned search keywords and weighted search results by click count.
- Built a backend prototype with Python and Flask, and a simple frontend, to check the search results.

PROJECTS

Final Project – "Improving Search Suggestion Relevance in an Online Bookstore with Hybrid BM25-SBERT Re-ranking" | *Python, Flask, OpenSearch* Feb 2026 - Jul 2026

- Group project of two people. I was responsible for building a search suggestion system for an online bookstore. It uses hybrid re-ranking, which combines BM25 and SBERT, on a dataset of about 52 thousand books.
- Did data preprocessing, candidate retrieval, re-ranking, and testing.
- Evaluated the system with the nDCG@10 metric on 100 test queries. The hybrid method (α = 0.35) scored 0.6973. BM25 alone scored 0.6562, and SBERT alone scored 0.6240.

Mini Commerce Kampus – Backend Microservices | *Java, Spring Boot, PostgreSQL* Jul 2026
Final assignment for the Junior Backend Spring Boot Developer training (Arutala Lab)

- Built two independent Spring Boot services (catalog-service and order-service), each with its own PostgreSQL database. The services talk only through HTTP REST API, with no direct database access between them.
- Built REST APIs for products and orders with Spring Data JPA, input validation, and business rules (unique SKU, stock cannot be negative, INACTIVE products cannot be ordered, order status PENDING/PAID/CANCELLED).
- Designed the create-order flow: check the product and reduce stock through HTTP to catalog-service, save a snapshot of the product name and price, and return the stock when an order is cancelled. Tested the APIs with Postman.

Black Box and White Box Testing - Zaidan Application | *Python, Spreadsheet* Mar 2025 - Apr 2025
Final assignment for the Software Testing course

- Tested an application with black box and white box testing, including test cases, test data, and test results.
- Recorded all testing steps in a spreadsheet, from scenarios and expected results to actual results, so they are easy to trace..

The Films – Film Database Application | *React + Vite, Express.js, MySQL* Aug 2024 - Des 2024
Group project (2 people), Web Development course

- Built a web app with information about films from many countries and genres, using data from the TMDB API. The app has JWT login, film search, film details, user reviews, and a CMS to manage content.
- Built the user interface with React + Vite and the backend with Express.js, with MySQL as the database.
- Used pagination on the film list and indexing in MySQL.

Kamus Sunda – Indonesia | *C* Apr 2023 - Mei 2023

- Built a console-based dictionary program with Binary Search Tree and AVL Tree. It supports CRUD operations, dynamic memory

allocation, and saving data in external files.

ORGANIZATIONAL EXPERIENCE

Himpunan Mahasiswa Komputer Politeknik Negeri Bandung

Junior Staff, Research, Education, and Technology Department. Jun 2023 - Des 2023

- Made the questions for Tisigram: Computational Thinking Competition.
- Was the deputy head of the "Kajian Mahasiswa Berprestasi" program and coordinated activities during the program.
- Took part in all department programs, such as Tisigram, Kajian Mahasiswa Berprestasi, and Sparkling Hustle.

Member of Human Resource Management Special Body. Jul 2024 - Des 2024

- Helped improve the performance and quality of the executive board members of Himpunan Mahasiswa Komputer Politeknik Negeri Bandung on an ongoing basis.

SKILLS

- **Programming Language**: Python, Java, C, PHP, JavaScript, GO.
- **Framework & Database**: Laravel, ReactJS, ExpressJS, Flask, FastAPI, Spring Boot, MySQL, MongoDB, Docker, Git, Elasticsearch, OpenSearch.
- **Other Skills**: Machine Learning, Selenium, Power BI, Figma, HTML, CSS, Postman, Cucumber.

ACHIEVEMENTS & CERTIFICATIONS

- **Frontend Development** – MySkill Short Class Jul, 2023
- **ASEAN Data Science Explorers Enablement Session** – SAP Analytics Cloud Sep, 2023
- **Pendanaan Program Kreativitas Mahasiswa (PKM-KC) Polban** Des, 2023
  SmartAnthro: Alat Pendeteksi Stunting Dini pada Balita
- **Backend: Basic Golang** – MySkill Short Class Okt, 2023
- **Junior Backend Spring Boot Developer** – Arutala Lab Jul, 2026
- **TOEIC** – Score 485 Mei, 2026
